KONGU ARTS AND SCIENCE COLLEGE

(An Autonomous Institution, Affiliated to Bharathiar University, Coimbatore)

ERODE – 638 107

SYLLABUS

Sem	Course Code	CORE PAPER – X RESEARCH METHODOLOGY AND BIOSTATISTICS	Total Marks: 100		Hours	Credits
			CIA:25	ESE:75	Per Week	
III	17PBFCT301				5	4

Objective(s):

- To enable the student to understand the concept of the methods used in scientific research
- To emphasize on the importance of statistical concepts
- To provides guidelines on accessing scientific literature and preparing scientific papers and presentation

Course Outcome:

On successful completion of the course, Students will able to

- CO1 - Propose and distinguish appropriate research designs and methodologies to apply to a specific research project
- CO2 - Understand Data presentation techniques and research report writing
- CO3 - Know about averages in detail and interpret Correlation and Regression
- CO4 - Understand the concept of large samples with applications.
- CO5 - Know and apply test for small samples

UNIT I**Research and Research Design**

Research: Objectives of Research , Types & Significance of Research. Criteria for good Research, Selecting & defining a Research problem–Limitations in Research – Qualities of a Good Research Worker

Research Design

Need for Research design, Features of good Research design, Classifications of Research Design Hypothesis testing, Errors in Research Design.

UNIT II**Report Writing and Presentation of Data**

Report Writing; Significance of Report writing, different steps in Report writing, Bibliography, Types of Report, layout of Research paper. Writing research reports for Scientific Journals ; Impact factor of Journals, Ethical issues related to publishing, Plagiarism and Self-Plagiarism, Shodhganga- Digital repository of Thesis, Intellectual Property Rights (IPR).

Presentation of Data: Graphical presentation - Tabular, Chart, Diagrammatic presentation.

Dr. N. RAMAN
Dr. N. RAMAN
 PRINCIPAL,
 KONGU ARTS AND SCIENCE COLLEGE
 (AUTONOMOUS)
 NANJANAPURAM, ERODE - 638 107.

UNIT III

Measures of Averages: Arithmetic Mean - Median - Quartiles and Deciles - Mode - Related problems.

Measures of Dispersion: Range - Quartile Deviation - Standard Deviation - Coefficient of Variation

Sample Correlation - Rank Correlation - Properties - Limitations.

Regression - Regression lines - Properties.

UNIT IV

Large Samples: Characteristic of a Sampling Distribution - Standard Error of the mean - Test of hypothesis - Significance Level - Test for a specified mean - Test for equality of two means - Test for specified proportion.

UNIT V

Small Samples t Test: Introduction - Uses of t Test - Properties of the sample distribution of t - Test for a specified mean - Test for equality of two means - t Test for paired observations. **Analysis of Variance:** One way and Two way classification - Chi Square test - Test of independent of attributes: SPSS packages.

Sem.	Course Code	CORE PAPER XII- ADVANCED CLINICAL BIOCHEMISTRY	Total Marks: 100		Hours Per Week	Credits
			CIA: 25	ESE: 75	4	4
III	17PBFCT303					

Objective(s):

- To understand the common metabolic pathology and enzyme assays
- To provide an insight into Specimen collection and processing
- To understand Liver and Renal function tests
- To gain knowledge about Cancer biology and Free radicals.

Course Outcome :

Upon successful completion of this course, students will be able to:

- CO1 - Understand the methods of collection of Sample in basic analysis of clinical Biochemistry
- CO2 - Correlate testing to Blood system to assess the abnormal conditions of the Blood disorders
- CO3 - Understand the Enzymes role in Diagnostic disorders of Organs
- CO4 - Learn about the Functional tests and Clinical conditions of the diseases to understand the significance of Diagnostic
- CO5- Assess the Various free radicals and cancer markers in various disease

UNIT – I**Specimen collection and processing**

Collection of blood - Vein puncture, Skin puncture and Arterial puncture. Collection with syringe.. Anticoagulants.

Collection and analysis of Normal and Abnormal Urine and its Clinical significance of sugars, proteins, ketone bodies, bilirubin.

CSF: Collection, Composition, Chemical examination and analysis.

UNIT II**Serology, Hematology and Erythrocyte metabolic disorder**

Serology and Hematology: Immunological test for Pregnancy and Rheumatoid arthritis (RA). ESR, Determination of Hemoglobinopathies – Sickle cell anemia, Thalassemia and their identification.

Disorders of Erythrocyte metabolic pathways, Porphyrins and Porphyrins.

UNIT III**Clinical Enzymology**

Principle, assay, and clinical significance of Transaminases, Gamma – glutamyl transferase, Creatine kinase, Lactate Dehydrogenase, Isocitrate Dehydrogenase, Glutamate Dehydrogenase, Glucose -6-phosphate Dehydrogenase, Acid and Alkaline Phosphatases and Ceruloplasmin.

Enzyme pattern in diseases: Hepatobiliary diseases, Myocardial infarction – Role of Troponin.

Dr. N. RAMAN
PRINCIPAL,
KONGU ARTS AND SCIENCE COLLEGE
(AUTONOMOUS)
NANJANAPURAM, ERODE - 638 107.

UNIT IV**Thyroid, Liver and Renal Function tests**

Thyroid function test: test based on primary function- measuring circulating T3, T4, TSH level and in vitro resin-uptake of T3 test.

Liver function test: Jaundice, Cirrhosis, Hepatitis and Gall stones.

Renal function test: Acute and Chronic renal failure. Clearance tests - Urea, Creatinine, Inulin, Renal calculi.

UNIT V**Cancer biology and Free Radicals**

Oncology:- Cancer markers for Oral cancer, Prostate cancer and Breast cancer.

Tumour markers:- AFP, CEA and Carcinogenic agents.

Free radicals in health and diseases: - Introduction, Types of free radicals. Free radical induced lipid peroxidation, Oxidative damage to lipids, proteins and DNA. Antioxidants (Enzymic – SOD, Glutathione Peroxidase, Glutathione Reductase, Catalase; Non Enzymic - Ascorbic acid, Tocopherol, Reduced Glutathione).

Text Books

Sem.	Course Code	CORE PAPER XIII- GENETIC ENGINEERING	Total Marks: 100		Hours Per Week	Credits
			CIA: 25	ESE: 75		
III	17PBFCT304				5	4

Objective(s):

- To introduce the basics and advent of DNA research in gene cloning
- To provide an insight into the techniques and applications of gene technology
- To understand the ability to change gene expressions
- To gain knowledge about the potentially momentous applications of transgenic in treating diseases

Course Outcome:

Upon successful completion of this course, students will be able to:

- CO1 - Able to understand the capacity of different cloning vectors and its role in gene cloning
- CO2 - Assess the ability of using various nucleic acid probes; selection and identification of recombinants
- CO3 - Had insight into various hybridization techniques
- CO4 - Acquire sound knowledge about expression of cloned genes in different host systems
- CO5 - Learn about transgenic plant and animal production and applications.

UNIT – I**Basics of gene cloning**

Basic steps in Gene Cloning. Restriction Endonuclease – Types and Features; Ligations; Linkers and Adaptors.

Vectors of gene cloning: Plasmid vectors – Basic Features. pBR322, pUC, Natural vectors – pSC101, pEMBL, pBluescript.

Bacteriophage vectors – Lambda phage, M13 phage, Cosmid.

Viral vectors – Baculoviruses as vectors, Recombinant vaccinia virus vectors, Retrovirus vectors.

High capacity cloning vectors – BAC, YAC, PAC, HAC.

UNIT – II**Introduction of DNA into Bacterial cells**

Preparation of Competent Cells, Transformation of E.coli, Selection of transformed cells, Identification of Recombinants.

Introduction of Phage DNA into bacterial cell, Identification of Recombinant phages.

Genomic library and cDNA library. Short gun Cloning method.

Nucleic acid probes: Types – DNA, RNA and Oligonucleotide probes.

Probe Labeling methods: Strand synthesis labeling (DNA Probes), Run-off transcription (RNA Probes), End labeling (Oligonucleotide Probes).

↓
Dr. N. RAMAN
PRINCIPAL
KONGU ARTS AND SCIENCE COLLEGE
(AUTONOMOUS)
NANJANAPURAM, ERODE - 638 107.

UNIT – III**Hybridization and PCR technique**

Southern, Northern and Western hybridization, Dot Blot, Insitu hybridization – FISH.

PCR – Design of primers, Types (Standard PCR, Quantitative Real Time PCR, Reverse Transcriptase PCR). PCR in genomic analysis and diagnostic application.

Hybridization based applications: DNA fingerprinting, RFLP.

PCR based applications: RAPD, RACE.

UNIT – IV**Expression of Cloned genes and Recombination selection**

Expression vectors – Production of proteins from cloned genes. Fusion proteins as biopharmaceutical – Insulin, Erythropoietin.

Expression of cloned genes in *E.coli*.

Cloning and expression of cloned genes in *Bacillus subtilis*.

Cloning in Yeast: Yeast Expression Vectors. Expression of cloned genes in *S.cerevisiae*.

Recombination, Selection and Screening Methods – Insertional Inactivation, Colony (plaque) hybridization, HRT & HART.

UNIT – V**Gene Transfer Methods in Animal and Plant Cells**

Selectable Markers (Antibiotic and Antimetabolite genes) and Reporter Genes.

Gene knock out Technology. DNA Sequencing, Protein Engineering: Site Directed Mutagenesis.

Transgenic science in plant improvement, Biopharming - plants as bioreactors.

Transgenic science for animal improvement, Biopharming- Animals as bioreactors.

Production of Transgenic Plants – Golden Rice

Gene Therapy – Ex vivo and In vivo gene therapy, Somatic and Germ line gene therapy.

Stem cells and gene therapy. Human Genome Project.

Text Books

Sem.	Course Code	CORE PAPER XIV- PHARMACEUTICAL BIOCHEMISTRY	Total Marks: 100		Hours Per Week	Credits
			CIA: 25	ESE: 75		
III	17PBFCT305				4	4

Objective(s):

- To learn various routes of Drug administration, its distribution, metabolism and excretion
- To understand the Drug –Receptor interaction
- To gain knowledge about effect of drugs on Kidney, Central Nervous system and associated diseases

Course Outcome:

On successful completion of the course students will be able to:

- CO1 - Obtain Pharmacokinetic concepts of chemotherapeutic agents
- CO2 - Develop an understanding of Adverse Drug Responses
- CO3 - Obtain the knowledge of various Chemotherapeutic agents
- CO4 - Gain an idea of Diuretic drugs and its action
- CO5 - Understand the Neurodegenerative disorders and its drugs

UNIT-I**Basic concepts of Drug and Pharmacokinetics**

Drugs: Pharmacokinetics, Pharmacodynamics, Sources and Classification of drugs, Dosage forms, Routes of administration. Structural features and Pharmacological activity of drugs – Optical isomerism, Geometrical isomerism and Conformational isomerism.

Drug Absorption: Mechanisms, Physicochemical properties affecting drug absorption.

Drug Distribution: Definition, Factors determining drug distribution.

Drug Metabolism: Biotransformation, Factors, Mechanism of Cytochrome P₄₅₀. Microsomal and Non – Microsomal reactions ; Phase I and Phase II reactions.

Excretion of drugs: Renal excretion mechanism.

UNIT-II**Drug receptor interaction and Pharmacological responses**

Drug receptors: Theories, Types, Forces involved in Drug-Receptor interaction.

Drug response: Adverse response to drugs, Drug tolerance and intolerance, Tachyphylaxis, Factors modifying the effects of drug action.

Assay of Drug Potency: Chemical, Biological and Immunological assay.

UNIT-III**Chemotherapy**

Drugs used in Respiratory disorders: Bronchial Asthma and Pulmonary tuberculosis.

Antimicrobial Drugs: Sulfonamide, Penicillin and Amino glycosides – Properties of aminoglycosides , Mechanism and Pharmacokinetics of Streptomycin.

Antiviral Drugs: Acyclovir and Famciclovir.

Cancer Chemotherapy: Classification of Anticancer Drugs - Mechanism of action of Antimetabolites, Alkylating agents and Natural products.

Dr. N. RAMANA
 PRINCIPAL
 KONGU ARTS AND SCIENCE COLLEGE
 (AUTONOMOUS)
 NANJANAPURAM, ERODE - 638 107.

UNIT -IV

Drugs acting on Kidney

Diuretics: Mode of action and Classification of Diuretics.

Pharmacology of Diuretics : Loop Diuretics, Thiazide Diuretics, Potassium Sparing Diuretics, Osmotic Diuretics, Carbonic anhydrase Inhibitors, Xanthine Diuretics, Mercurial Diuretics and Acidifying salts.

Drug induced Nephrotoxicity: Drugs inducing different types of Nephrotoxicity.

UNIT -V

Drugs acting on Central Nervous System

Drug Abuse: Psychological Dependence and Physical Dependence.

CNS Stimulants: Psychomotor Stimulants – Amphetamine ; Psychotomimetics (Hallucinogens) - Lysergic Acid Diethyl amide (LSD).

Non Steroidal Anti Inflammatory Drugs (NSAIDs): Classification of NSAIDs, Pharmacokinetics and Mechanism of action of Paracetamol.

Neurodegenerative Disorder Drugs: Drugs used in Parkinson's disease, Huntington's disease and Alzheimer's disease.

Text Books

Sem.	Course Code	CORE BIOCHEMISTRY PRACTICAL III	Total Marks: 100		Hours Per Week	Credits
III	17PBFCP306		CIA: 40	ESE: 60	4	3

Objective(s):

- To learn the techniques of clinical analysis

Course Outcome:

On successful completion of the course students will be able to:

- CO1 - Gain an idea of Lipid components in the given sample
- CO2 - Know the knowledge of Quantitative analysis of Carbohydrates
- CO3 - Understand the clinical importance of Vitamins
- CO4 - Obtain the knowledge of activity of enzymes in the sample
- CO5 - Understand the abnormal range and diseases

I. Blood/ Serum/ Tissue Analysis**A. Estimation of Blood /Serum/Tissue components :**

1. Estimation of Triglycerides
2. Estimation of Cholesterol- Zak's method
3. Estimation of Glycosylated Hemoglobin
4. Estimation of Glycogen by Anthrone Method
5. Estimation of Ascorbic Acid
6. Estimation of α -Tocopherol

B. Determination of the activity of the following Tissue /Plasma /Serum Enzymes:

- i) Glucose 6 Phosphatase
- ii) Fructose 1,6 biphosphatase
- iii) Reduced Glutathione
- iv) Acid Phosphatase

Reference Books

Sem.	Course Code	ELECTIVE PAPER III	Total Marks: 100		Hours Per Week	Credits
III	17PBFET307	BIOCHEMICAL AND ENVIRONMENTAL TOXICOLOGY	CIA: 25	ESE: 75	4	4

Objective(s):

- To understand the basic concepts of toxicology.
- To understand the relationship between exposure, hazards and development of disease.
- To assess risk factors associated with exposure to toxic chemicals

Course Outcome:

On successful completion of the course students will be able to:

- CO1 - Design strategies for study the of dose-response relations.
- CO2 - Critically evaluate different advanced exposure assessment methods.
- CO3 - Analyze the effects of different types of Hazardous pollutants.
- CO4 - Clearly understand the mechanisms and mode of action of different toxic agents.
- CO5 - Gain knowledge about utilizing microbes and natural agents for Bioremediation and Detoxification purposes.

UNIT – I

General principles of Toxicology: Definition, Sources of environmental toxicants, Classification of toxicants. Evaluation of Toxicity – Acute Toxicity, Chronic Toxicity, Lethal Concentration (LC), Lethal Dose (LD), Lethal Time (LT), Effective Concentration (EC), Effective Dose (ED), Knockdown Dose (KD), Knockdown Time (KT), Medium Tolerance Limit (TLm) – Definitions only. Dose response relationship. Factors affecting action of Toxicants. Biomarkers of Toxicity.

UNIT – II

Biotransformation: Routes of exposure of Toxicants. Absorption, Distribution, Accumulation, Biotransformation (Phase I and Phase II reactions) and Elimination. Bioavailability – Area under curve.

Toxicity Testing – Invivo (Acute, Subchronic and Chronic toxicity test) and Invitro Test (Prokaryotic and Eukaryotic mutagenicity test, DNA Damage and Repair).

UNIT – III

Metal poisoning – Definition, Types. Toxic mechanism and sites of action of Mercury, Lead, Chromium, Cadmium and Fluoride.

Hazardous pollutants – Characteristics and Categories (Plastics and Medical wastes)

Toxicity of pesticides – Persistent and Degradable pesticides with examples - Bioconcentration and Biomagnification.

Dr. N. RAMAN
PRINCIPAL
KONGU ARTS AND SCIENCE COLLEGE
(AUTONOMOUS)
NANJANAPURAM, ERODE - 638 107.

UNIT – IV**Action of Toxicants:**

Teratogenesis - Causes, Mode of action and Evaluation (Examination of Pregnant animals and Fetus).

Carcinogenesis - Causes, Mode of action and Evaluation (Biochemical markers).

Mutagenesis - Causes, Mode of action and Evaluation (Ame's test).

Organ Toxicity

Hepatotoxicity – Hepatotoxicants (Carbon tetrachloride) and its mechanism

Neurotoxicity – Structural effects of toxicants on neurons, Toxicant mediated alteration in synaptic junction.

UNIT – V

Bioremediation: Insitu and Exsitu Bioremediation. Phytoremediation. Bioabsorption of metals by bacteria, fungi and actinomycetes (with one example).

Natural therapies to promote detoxification – Antioxidants: Vitamin A, Vitamin C, Vitamin E and Phenolics. Glutathione. Detoxifying agents: Alfalfa, Chlorella. Protective agents: SAM, Silibinin.

Text Books

Sem.	Course Code	ADVANCED LEARNERS COURSE-II	Total Marks: 100	Hours Per Week	Credits
III	17PBFAL311	BIOETHICS AND INTELLECTUAL PROPERTY RIGHTS	ESE: 100	Self Study Paper	2

Objective(s):

- This subject aims at studying ethical concerns about patenting of living organisms and genetic material.
- The objectives also include the effects of international trade, future economic systems and the ethical and social impact of Biosciences.

Course Outcome:

On successful completion of the course students will be able to:

- CO1 - Understand the concept of Genetic Engineering
- CO2 - Learn the knowledge of Ethical Issues
- CO3 - Understand the Biosafety concepts
- CO4 - Gain the knowledge of Intellectual Property Rights And Regulations
- CO5 - Understand the Patent and its Types

UNIT I**Biosciences, Society and Legal Issues**

Biotechnology and Social responsibility, Public acceptance issues in Biotechnology, Biotechnology and Biological knowledge in developing countries: The legal and socioeconomic impacts of biotechnology, public awareness in genetic engineering . Biodiversity- National and International laws to maintain Biodiversity, Environmental sustainability, Public Vs Private funding.

UNIT II**Ethical Issues:**

Ethical issues regarding genetically modified organisms (foods and crops); bioethics in biodiversity and resource management. Ethical issues in Human Cloning and Stem Cell Research. Testing of drugs on human volunteers, organ transplantation and ethical issues; Xenotransplantation and its ethical and social issues. Human Genome project and Genome editing.

UNIT III**Biosafety Concepts And Issues**

Introduction to Biosafety: definition and needs of biosafety, levels of biosafety, applications of biosafety at work place, Biosafety during development of biotech products. Good manufacturing practice and Good laboratory practices (GMP and GLP). The Cartagena protocol on biosafety. Safety assessment of foods and food ingredients produced by genetically modified microorganisms. Social and ethical implications of biological weapons.

Dr. N. RAMAN
PRINCIPAL,
KONGU ARTS AND SCIENCE COLLEGE
(AUTONOMOUS)
NANJANAPURAM, ERODE - 638 107.

UNIT IV**Intellectual Property Rights And Regulations**

Introduction to IPR: IP definition and needs, GATT, TRIPS, & WTO Agreement. Different forms of IPR - Copyrights, Trademarks, Industrial designs, Geographical Indications, Traditional Knowledge, Plant varieties, Trade Secrets. Role of IPR in Research and Development. Increasing the value of a technology through the use of Trademark.

UNIT V**Patent**

Introduction to Patents -Types of Patent applications: Classification of patents in India, Classification of patents by WIPO, Categories of Patent, Special Patents, Patenting Biological products. Patentable subject matter, Inventions that are not Patentable, Term of patent, Maintenance of a Patent.

DEPARTMENT OF BIOCHEMISTRY

Cordially invite you to the

BLOOD GROUP IDENTIFICATION CAMP

on July 19th, 2018

@

Biochemistry Lab

Time: 9.30 A.M. (Onwards)

Department of Biochemistry organized Blood Group Identification Camp on 19 July 2018. The camp was arranged for I UG and IPG students. Students of IIB.Sc Biochemistry done grouping for over 400 students. The Blood group information's of the students was recorded and it was filled as Blood group directory-2018. This helps them to donate or receive blood in case of emergency conditions.

“Receiving blood that's incompatible with your blood type could trigger a dangerous immune response.”

DEPARTMENT OF BIOCHEMISTRY

Two-Day Lecture Workshop on “Emerging Trends in Biochemistry”

20.09.2018 - 21.09.2018

REPORT

Department of Biochemistry organized a Science Academies Sponsored “Two-Day Lecture Workshop on Emerging Trends in Biochemistry” in association with Indian Academy of Sciences (IASc), Bengaluru, Indian National Science Academy (INSA), New Delhi, and The National Academy of Sciences India on 20.09.2018 & 21.09.2018 on UVS Hall, Kongu arts and science college, Erode

Dr. K. Veluthambi, FNA. FASc.FNASc.Convener, Lecture Workshop Professor (Retired)INSA Senior Scientist, School of Biotechnology, MaduraiKamarajUniversity, Madurai, **Prof. B. J. Rao**, Professor and Dean, Indian Institute of Science , Education and Research (IISER), Tirupati, **Dr. M. Raveendran**, Ph.D, Professor, Centre for Plant Molecular Biology (CPMB), Tamilnadu agricultural university, Coimbatore and **Dr. P. V. Shivaprasad**, Ph.D, National Centre for Biological Sciences tata institute of fundamental research (NCBS-TIFR), Bangalore were the chief guests for the two day function. Over 175 students and Research scholars were benefited on the discussion on recent trends and development in field of Biochemistry.
