SYLLABUS

Sem.	-Course Code	Core Paper - I COMPUTER ARCHITECTURE	Total M	arks:100	Hours Per Week	Credits
I	21PBKCT101	COMPUTER ARCHITECTURE	CIA: 50	ESE:50	4	4
Cour	se Objectives: Or	n successful completion of the course t	he students	will have:		
		outer architecture, Number system, I/C				
3. En	nanced knowledge	can equations for ICs and simplify the in Computer Architecture to attain E	equations to mployabilit	o frame sim y opportun	ple ICs.	
3. En	se Outcomes (CC	can equations for ICs and simplify the in Computer Architecture to attain End. O): On completion of the course, study	equations to mployabilite dents shoul	o frame sim y opportun	ple ICs.	
3. En	se Outcomes (CC	can equations for ICs and simplify the in Computer Architecture to attain E	equations to mployabilite dents shoul	o frame sim y opportun	ple ICs.	

Explore the hardware and software structure of different types of memories K1: Remember; K2: Understand; K3: Apply; K4: Analyze; K5: Evaluate; K6: Create

Categorize and apply different addressing modes and instruction formats

Write micro operations and instructions for ALU

CO3

CO 4

CO 5

Digital Logic Circuits: Digital Computers - Logic Gates - Boolean Algebra - Map Simplification Combinational Circuits - Flip-flops - Sequential Circuits; Digital Components: Integrated Circuits -Decoders - Multiplexers - Registers - Binary Counters - Memory Unit

Unit-II:

Data representation: Data types - Complements - Fixed-point representation - Floating-point representation - Error Detection codes

Unit -III:

Registers Transfer and Micro operations: Registers Transfer Language - Register Transfer - Bus and memory transfers - Arithmetic micro operations- Logic and shift micro operations- Arithmetic logic shift unit

Unit -IV:

CPU: Register and stack organization - Instruction formats - Addressing modes - Data transfer and manipulation - Program control - RISC

Unit -V:

Input-output organization: Peripheral devices - I/O interface - Asynchronous data transfer. Memory organization: Memory hierarchy - Main memory - Auxiliary memory - Associative memory - Cache memory - Virtual memory

Skill Development Activities:

- 1. Draw the circuit of an 8-bit parity generator/checker having eight inputs and two outputs, one for even and the other for odd parity. Derive the value of the eighth input when the circuit is used to generate an even parity bit for seven message bits.
- 2. A digital system has three registers: AR, BR and PR. Three flip-flops provide the control functions for the system: S is a flip-flop which is enabled by an external signal to start the system's operation; F and R are used for sequencing the micro-operations. A fourth flip-flop, D is set by the digital system when the operation is completed. The function of the system is described by the following register transfer operation

ERODE

638 107

 $S: PR \leftarrow 0, S \leftarrow 0, D \leftarrow 0, F \leftarrow 1$

PRINCIPAL KONGU ARTS AND SCIENCE CO (AUTONOMOUS) NANJANAPURAM ERGUE 638 107

K6

P: F>-0. if (AR =0) then (D \leftarrow 1), if (AR \neq 0) then (R \leftarrow 1)

 $R: PR \leftarrow PR+BR, AR \leftarrow 1, R \leftarrow 0, F \leftarrow 1$

- a) Show that the digital system multiplies the contents of AR and BR and places the product in PR
- b) Draw a block diagram of the hardware implementation. Include a "start" input to set flip-flop S and a "done" output from flip-flop D
- 3. Assume that you have a computer with 1 clock cycle per instruction (1 CPI) when all accesses to memory are in cache. The only accesses to data come from load and store instructions. Those accesses account for 25 % of the total number of instructions. Miss penalty is 50 clock cycles and miss rate is 5 %. Determine the speedup obtained when there is no cache miss compared to the case when there are cache misses.

Sem. Course Code	Core Paper – III RELATIONAL DATABASE	Total Mark	ks:100	Hours Per Week	Credits
1 21PBKCT103	REEL TOTALE DITTERNIOL	CIA: 50 E	SE :50	4	4

Course Objectives: On successful completion of the course the students should have:

- 1. Acquired Knowledge and Applications of Database Models and Emerging Trends
- 2. Capable of Framing structured queries to get solution or report for a particular task
- 3. Refined the database tables to make it more efficient using the normalization techniques
- 4. Employability opportunities by enhancing the knowledge in Relational Database Management System.

Course Outcomes (CO): On completion of the course, students should be able to

CO 1	Explain the features of database management systems	
CO 2	Design relational models for real life applications and also construct queries with constraints and keys using SQL	K
CO 3	Apply the concept of transaction, concurrency control and recovery mechanism in database.] - F
CO 4	Identify the use of normalization and functional dependency in database design	
CO 5	Discuss the architecture for Parallel, Distributed and Object Database Systems	
		-

K1: Remember; K2: Understand; K3: Apply; K4: Analyze; K5: Evaluate; K6: Create

Unit -I:

Overview of database systems: Managing data- A historical perspective – File systems versus a DBMS -Advantages of a DBMS- Describing and storing Data in a DBMS - Queries in a DBMS - Transaction management - Structure of a DBMS. Database design & ER diagrams - Entities, Attributes, and Entity Sets - Relationships and Relationship Sets- Additional feature of the ER model- conceptual Database design with the ER model.

Unit -II:

Relational Model: Integrity constraints over relations - Enforcing integrity constraints - Querying relational data - Logical database design: ER to Relational - Introduction to Views - Destroying / Altering Tables & Views, Relational Algebra and Calculus: Relational Algebra - Relational Calculus

Unit-III:

SQL: Queries, Programming, Triggers: The form of a basic SQL Query - UNION, INTERSECT and EXCEPT - Nested Queries - Aggregate operators - Null values - Complex integrity constraints in SQL -Triggers & Active data bases. Transaction Management

Overview: The ACID Properties - Transactions & Schedules - Concurrent execution of Transactions - Lockbased concurrency control - Performance of Locking - Transaction support in SQL.

Unit-IV:

Schema Refinement and Normal forms: Introduction to Schema refinement - Functional dependencies -Reasoning about functional dependencies - Normal forms - Properties of Decompositions - Normalization -Schema Refinement in data base design - other kinds of dependencies. Security: Introduction to Database security -Access control - Discretionary Access control - Mandatory Access control - Additional issues to security. Concurrency control: 2PL, Serializability and Recoverability - Introduction to Lock Management -Lock Conversions - Specialized Locking techniques - Concurrency control without locking

Unit-V:

638 107

Databa

Parallel databases: Introduction - Architecture for parallel databases - Parallel Query individual operations -Parallel Query Optimization - Introduction to distributed evaluati BMS architecture sorting data in a distributed DBMSDPb wt RAMAN ystems: ERODE

PRINCIPAL. KONGU ARTS AND SCIENCE COLLEGE (AUTONOMOUS) NANJANAPURAM, ERODE - 638 107.

Motivation Example – Structured data types – Operation on structured data types – Encapsulation & ADTS – Inheritance - Objects. OIDS and Reference Types - Database design for and ORDBMS – OODBMS – Comparing RDBMS, OODBMS and ORDBMS.

Skill Development Activities:

- 1. A manufacturing company produces products. The following product information is stored: product name, product 1D and quantity on hand. These products are made up of many components. Each component can be supplied by one or more suppliers. The following component information is kept: component 1D, name, description, suppliers who supply them, and products in which they are used. Draw ERD to show how you would track information.
- 2. Demonstrate how to convert a database into 1NF, 2NF, 3NF.
- 3. Illustrate the transaction sequence for debiting a bank account.

Overview of java: Object-Oriented Programming - Control Statements & Blocks of Code - Lexical Issues - The Java Class Libraries. Data Types, Variables, and Arrays: The Primitive Types - Literals - Variables - Type Conversion and Casting - Automatic Type Promotion in Expressions - Arrays - Strings

Unit-II:

Operators: Arithmetic, Bitwise, Relational Operators, Boolean Logical, Assignment and "?" Operators – Operator Precedence – Control Statements: Selection, Iteration and Jump Statements – Classes: Class Fundamentals – Declaring Objects – Object Reference Variables – Methods – Constructors – this keyword – Garbage Collection – finalize() – Stack Class

Unit -III:

Inheritance: Basics – Superclass –Multilevel Hierarchy – Method Overriding – Dynamic Method Dispatch – Abstract Classes – final class – Object Class - Packages and Interfaces: Packages – Access Protection – Importing Packages - Interfaces – Exception Handling: Fundamentals – Types – Uncaught Exceptions – try and Catch – Multiple catch Clauses – Nested try Statements – throw – throws – finally – Built-in Exceptions – Exception Subclasses – Chained Exceptions

Unit -IV:

String Handling: Constructors – String Length – Special String Operations – Characters Extraction – String Comparison – Searching & Modifying a String – Data Conversion – StringBuffer – StringBuilder - Input / Output: I/O Classes and Interfaces – File – AutoCloseable, Closeable, and Flushable Interfaces – I/O Exceptions – Stream Classes – Byte & Character Streams - Serialization.

Unit -V:

Applet Class: Types – Basics – Architecture – Applet Skeleton – Display Methods – Requesting Repainting – Status Window – HTML APPLET Tag – Passing Parameters to Applets – Images: File Formats – Image Fundamentals – ImageObserver – Double Buffering – MediaTracker – ImageProducer – ImageConsumer – ImageFilter – Cell Animation – Regular Expressions: Core Java API Packages – Regular Expression Processing – Regular Expression (RMI) – Text Formatting

Skill Development Activities

1. Prepare a video to illustrate the working nature of control statements and blocks of code

2. Develop an inheritance structure to a Vehicle System.

KONGU ARTS AND SCIENCE COLLEGE (AUTONOMOUS) NANJANAPURAM. ERODE - 638 107 3. Design an applet for a moving cat.

Sem.	Course Code	Elective—I	Total Marks:100		Hours Per Week	Credits
1	21PBKET108	CRITICAL THINKING	CIA: 50	ESE:50	4	3

Course Objectives: On successful completion of the course the students should have:

- 1. Understood critical thinking, design thinking and Thinking patterns
- 2. Skills in Problem solving & Reasoning

Course Outcomes (CO): On completion of the course, students should be able to

CO 1	Understand the concepts of Critical thinking and its related technology
CO 2	Focus on the explicit development of critical thinking and problem solving skills
CO 3	Apply design thinking in problems
CO 4	Make a decision and take actions based on analysis
CO 5	Analyze the concepts of Thinking patterns, Problem solving & Reasoning in real time applications

K1: Remember; K2: Understand; K3: Apply; K4: Analyze; K5: Evaluate; K6: Create

Unit-I:

Critical Thinking: Definition, Conclusions and Decisions, Beliefs and Claims, Evidence – finding, evaluation, Inferences, Facts – opinion, probable truth, probably false, Venn diagram. Applied critical thinking: Inference, Explanation, Evidence, Credibility, Two Case Studies, critical thinking and science, critical evaluation, self-assessment.

Unit-II:

Design Thinking: Introduction, Need of Design Thinking, problem to question - design thinking process, Traditional Problem Solving versus Design Thinking, phases of Design Thinking, problem exploration, Stake holder assessment, design thinking for manufacturers, smart Idea to implementation

Unit -III:

Thinking to confidence, fear management, duty Vs passion, Team management, Tools for Thinking, prototype design, Relevance of Design and Design Thinking in engineering, human centered design, case study: apply design thinking in problem.

Unit -IV:

Problem solving: problem definition, problem solving methods, selecting and using information, data processing, solution methods, solving problems by searching, recognizing patterns, spatial reasoning, necessity and sufficiency, choosing and using models, making choices and decisions

Unit -V:

Reasoning: Deductive and hypothetical reasoning, computational problem solving; generating, implementing, and evaluating solutions, interpersonal problem solving. Advanced problem solving: Combining skills – using imagination, developing models, Carrying out investigations, Data analysis and inference. Graphical methods of solution, Probability, tree diagrams and decision trees

Skill Development Activities:

- 1. Discuss and compare Marks and Ranks
- 2. Model a prototype of a product/process of your own innovation
- 3. Develop any 10 spatial reasoning model of your own

					K ISC MC 1202	1-2021
Sem.	Course Code	Core Practical- II RELATIONAL	Total M	arks:100	Hours Per Week	Credits
1	21PBKCP110	DATABASE MANAGEMENT SYSTEMS LAB	NT CIA: 50 ESE:50		4	3
Cours	se Objectives: On	successful completion of the course	the students	s will have:		
2.	Knowledge to ap	oply the built-in functions of SQL in (2): On completion of the course, stu	query proce	ssing		
CO	Draw Entity-F	Relationship Diagram for the database	e systems			
CO	Evaluate the n	napping between entities and relation	iship using S	Schema		K1
co.	3 Implement the	DML, DDL, DCL and TCL Comm	ands			-
CO	Build a databa	ase system using Views and SET Ope	erators			K6
co:	5 Implement PL	/SQL Controls, Triggers, Procedures	and Packag	ges		
K1 :R	Remember; K2: U	Inderstand; K3 : Apply; K4: Analy	yze; K5 : E	valuate; K	6 :Create	

List of Programs

- 1. Draw an E-R diagram for a Student database and perform the DDL, DQL and DML commands
- 2. Create database Schema for a Employee-Pay Scenario and present the relational model
- 3. Write SQL query to implement JOINS, GROUP BY & ORDER BY commands
- 4. Write a SQL queries for Creating Views (with and without check option), Dropping views and Selecting from a view
- 5. Write SQL queries using SET Operators
- 6. Develop a Bank Amount Transaction database and implement Transaction commands
- 7. Write a SQL query to implement KEY constraints
- 8. Write a PL/SQL Program by using Iterative Controls and Loops
- 9. Write Program by the use of PL/SQL Procedures and Packages
- 10. Create a program to Implement PL/SQL Triggers and Cursors

1	21PBKCP111	DATA VISUALIZATION LAB	CIA: 25	ESE: 25	2	2

Course Objectives: On successful completion of the course the students will have:

- 1. Analyze and create effective data visualizations in order to provide new insights
- 2. Skills to prepare the visual reports for decision support system

Course Outcomes (CO): On completion of the course, students should be ableto

CO 1	Compute Mathematical functions in Excel
CO 2	Formulate Statistical functions in Excel
CO 3	Create dashboard to visualize data in real life applications
CO 4	Analyze data through pivot table
CO 5	Convert unstructured file to structured file

K1:Remember; K2: Understand; K3:Apply; K4: Analyze; K5: Evaluate; K6:Create

PROGRAM LIST

1.	Enter	the	following	data	in	an	Excel	worksheet:
----	-------	-----	-----------	------	----	----	-------	------------

Reg.No	Name	Tamil	English	Maths	History	Science	Total	Result	Class	Rank
M01	Anand	40	45	80	78	90				
M02	Moorthy	50	52	54	54	40				
M03	Lokesh	82	42	52	25	58				
M04	Patel	58	25	60	89	78			1	
M05	Suresh	45	87	47	39	58			1. 16	1.50
M06	Ganesan	87	90	89	45	39	100			
M07	Ravi	29	45	70	40.	48				
M08	Madhan	45	39	52	59	49				
M09	Karthick	90	40	69	64	28				

- a) Calculate the TOTAL values using SUM Function.
- b) Calculate the RESULT and CLASS values using IF function.
- c) Calculate the RANK values based on RESULT using RANK Function
- d) Compute and find the average mark for all subjects.
- e) Find the total number of students with First Class using COUNTIF function.
- f) Create a new sheet with the same table data, sort and filter the table using rank values

2. Enter the following data in an Excel worksheet:

Goods	Quantity	Cost	Discount	Revenue
Bat	263	2000	5%	26300
	590	50	10%	2950
	68	500		34000

-	8	Dumbles-5Kg	125	1150	10%	14375
-	9	Dumbles-10Kg	99	2150	10%	21285
-	10	Shorts	620	350	40%	86800
-	11	Jacket	465	2500	20%	232500
-	12	Sneakers	1032	3000	50%	1548000
+	13	Skipping rope	320	120	15%	5760

- a) Find out how many items were on discount using COUNT.
- b) Find out how many items/pieces of equipment are sold by the store using COUNTA.
- c) What products are not in the discount section using COUNTBLANK.
- d) Are there any products sold having cost more than 2000 along with a discount rate greater than 50% using COUNTIFS.
- e) Find out the average number of goods sold.
- f) Find the median of the number of goods sold in our sports store.
- g) Find the most frequent discount value given by the sports store using MODE.
- h) Find out the standard deviation to see the level of dispersion using STDEV.
- 3. Create a dashboard for Online Sales Tracking system.

4. Draw the Pivot table for the following data:

TripID	Late	Bus Driver	Weekday	Time		
1	12	John	Wednesday	8:45 AM		
3	1	Paulo	Tuesday	9:25 AM

Sem.	Course Code	Core Paper – VIII	Total Ma	arks:100	Hours Per Week	Credits	
11	21PBKCT204	SOFTWARE ENGINEERING	CIA: 50	ESE:50	4	4	

Course Objectives: On successful completion of the course the students will have:

- 1. Understand the software development models and ethics
- 2. The capability to plan and maintain software quality
- 3. Employability opportunities by enhancing the knowledge in Software Engineering

Course Outcomes (CO): On completion of the course, students should be able to

CO 1	Compare and apply the suitable software design model for the particular task
CO 2	Gather the requirements for the software project and do validation
CO 3	Design architectural and UML model for the projects
CO 4	Apply suitable testing methods to proof the software free of error
CO 5	Work with team and be able to manage teams

K1: Remember; K2: Understand; K3: Apply; K4: Analyze; K5: Evaluate; K6: Create

Unit -I:

Introduction: Professional Software Development – Software Engineering Ethics – Case Studies. Software Processes: Software Process Models – Process Activities – Coping with Change – Rational Unified Process. Agile Software Development: Agile Methods – Plan-Driven and Agile Development – Extreme Programming – Agile Project Management – Scaling Agile Methods.

Unit-II:

Requirements Engineering: Functional and Non-Functional Requirements — Software Requirements Document — Requirements Specification, Engineering Process, Elicitation and analysis, Validation and Management. System Modeling: Context Models — Interaction Models — Structural Models — Behavioral Models — Model-Driven Engineering

Unit -III:

Architectural Design: Architectural Design Decisions, Views and Patterns – Application Architectures. Design and Implementation: Object-Oriented Design Using the UML – Design Patterns – Implementation Issues – Open Source Development.

Unit -IV:

Software Testing: Development Testing – Test-Driven Development – Release Testing – User Testing. Software Evolution: Evolution Process – Program Evolution Dynamics – Software Maintenance – Legacy System Management.

Unit -V:

Project Management: Risk Management – Managing People- Team Work. Project Planning: Software Pricing – Plan-Driven Development – Project Scheduling – Agile Planning – Estimation Techniques. Quality Management: Software Quality and Standards – Reviews and Inspections – Software Measurement and Metrics.

CE COL

ERODE

Skill Development Activities:

1. Let a Company called ABC group makes consumer products for safe home and releases for commercial use. There is a Software Engineering Team consists of members and team manages. Give a write up on the discussion of the team members and head for selecting the process model.

PRINCIPAL,
KONGUARTS AND SCIENCE COLLEGE
(AUTONOMOUS)

2. Consider you are developing software for a departmental store in an urban city. To go for design phase, you have to complete the requirement gathering. Sketch the requirements gathering activities carried out by your software development team.

3. Consider you are developing a dynamic website for an autonomous college. Draw the use case diagram for the design of the website. Along with use case diagram sketch the navigation flow for the website.

Sem.	Course Code	Elective- II PHP PROGRAMMING	Total M	arks:100	Hours Per Week	Credit s
II	21PBKET208	PHP PROGRAMIMING	CIA: 50	ESE :50	4	3

Course Objectives: On successful completion of the course the students should have:

- 1. Understood the basic and advanced concepts of PHP
- 2. Understood the programming and OOP's concepts of PHP
- 3. Understood Usage of MySQL along with PHP

Course Outcomes (CO): On completion of the course, students should be ableto

CO 1	Apply the concepts of PHP
CO 2	Implement the OOP's concept in programming
CO 3	Implement Database connectivity with MySQL and XML
CO 4	Develop the dynamic webpage
CO 5	Handle errors using exceptions and validate inputs

K1: Remember; K2: Understand; K3: Apply; K4: Analyze; K5: Evaluate; K6: Create

Unit -I:

Introducing PHP: History - Unique Features - Basic Development Concepts - Creating Your First PHP Script - Sample Applications. Using Variables and Operators: Storing Data in Variables - Understanding PHP's Data Types - Setting and Checking Variable Data Types - Using Constants - Manipulating Variable with Operators - Handling Form Input. Controlling Program Flow: Writing Simple Conditional Statements - Writing More Complex Conditional Statements - Repeating Actions with Loops - Working with String and Numeric Functions.

Unit-II:

Working with Arrays: Storing Data in Arrays - Processing Array with Loops and Iterators - Using Arrays with Forms - Working with Array Functions - Working with Date and Times. Using Functions and Classes: Creating User - Defined Functions - Creating Classes- Using Advanced OOP Concepts.

Unit -III:

Working with Files and Directories: Reading Files - Writing Files - Processing Directories - Performing Other File and Directory Operations.

Working with Databases and SQL: Introducing Databases and SQL - Using PHP's MySQLi Extension - Adding or Modifying Data - Handling Errors - Using PHP's SQLite Extension - Using PHP's PDO Extension.

Unit -IV:

Working with XML: Introducing XML - Using PHP's Simple XML Extension - Using PHP's DOM Extension.

Working with Cookies, Sessions and Headers: Working with Cookies - Working with Sessions - Using HTTP Headers

Unit-V:

Handling Errors: Handling Script Errors - Using Exceptions - Logging Errors - Debugging Errors. Securing PHP: Sanitizing Input and Output - Securing Data - Validating User Input - Configuring PHP Security.

QUESTION PAPER PATTERN

Mr..Vijayakumar

SECTION-A($10 \times 1 = 10 \text{ Marks}$)

Answer ALL the questions
Choose the correct answer
Four options should be given

('None of these' should be avoided)

SECTION-B (5 X 3 = 15 Marks)

Answer ALL the questions
Either or type
Two questions from each unit

SECTION-C(5 \times 5 = 25 Marks)

Answer ALL questions
Question Number: 16 to 19 (Either or type)
Question Number 20 is Compulsory Case Study

PROGRAM LIST

- 1. Virtual File System (VFS) Implementation in Linux
- 2. Implement Linux Kernel Module Program.
- 3. Implement Deadlock Avoidance Using Semaphores
- 4. Implement CPU scheduling policy in a Linux OS.
- 5. Write a C program that illustrates two processes communicating using Shared memory
- 6. Write a shell script that receives any number of file names as arguments, checks if every argument supplied is a file or directory and reports accordingly that whenever the argument is a file it reports number of lines present in it
- 7. Write an awk script to count number of lines in a file that does not contain vowels
- 8. Write a C program to list every file in directory, its inode number and file name
- 9. Write a C program that receives a message from message queue and display them
- 10. Write a C program that illustrate the suspending and resuming process using signal

Sem.	Course Code	ADVANCED LEARNERS COURSE	Total N	Aarks: 100	Hours Per Week	Credits
111	20PBIAL312	HUMAN COMPUTER INTERACTION	CIA:	ESE:100		2

Objective(s): On successful completion of the course the students should have:

- Understand the basics of human and computational abilities and limitations.
- Understand the fundamental aspects of designing and evaluating interfaces.

Course Outcomes:

At the end of the course, students will be able to

- CO1 Understand the fundamentals and Framework of HC1
- CO2 Apply the HCI in the Software Process
- CO3 Evaluate the design rules and implementation support for systems
- CO4 Understand basic theories, tools and techniques in HCI
- CO5 Design a User Support System

UNIT-I

The Humans: Introduction – I/O Channels – Human Memory – Reasoning and problem solving. The Computers: Introduction - Devices - Memory - Processing and networks. The Interaction: Introduction - Models of interaction - Frameworks and HCI - Ergonomics - Interaction styles -Elements of the WIMP interface - Interactivity - The context of the interaction.

UNIT-II

Paradigms: Introduction - Paradigms for interaction. Interaction design basics: Introduction -Design - The Process of design - User focus - Navigation design - Screen design and layout - Iteration and prototyping. HCI in the software process: Introduction - The software life cycle - Usability engineering - Iterative design and prototyping - Design rationale.

UNIT-III

Design rules: Introduction - Principles to support usability - Standards - Guidelines - Golden rules and heuristics - HCl patterns. Implementation support: Introduction - Elements of windowing systems - Programming the application - Using toolkits - User interface management systems.

UNIT-IV

Evaluation techniques: Definition of evaluation - Goals of evaluation - Evaluation through expert analysis - Evaluation through user participation - Choosing an evaluation method. Universal design: Introduction - Universal design principles - Multi-modal interaction - Designing for diversity.

UNIT-V

User support - Introduction - Requirements of user support - Approaches to user support -Adaptive help systems - Designing user support systems.

Seminar on "Creativity and Innovation in IT"

28 October 2021

The Department of Computer Science (P.G.) has inaugurated its ITxcels Association Activities and organized a Seminar on "Creativity and Innovation in IT" on 28 October 2021. The Resource Person was Dr. A. Vijaya, Assistant Professor & Head, Department of Computer Applications, Government Arts College (Autonomous), Salem.

The objective of this seminar is to impart knowledge on Latest technologies in IT. The seminar was attended by M.C.A. and M.Sc Computer Science Students. The resource person has provided information about how to apply knowledge in domain area and to improve the creativity in solving the complex problems of Information Technology. The students gain insight in learning new languages and develop their creativity to apply in IT

Fields.
